“Bringing heaven down to earth”: The purpose and place of religion in UK food aid

Abstract

Purpose

This paper uses data from a city with a multi-ethnic, multi-faith population to better understand faith-based food aid. It aims to understand what constitutes faith-based responses to food insecurity; compare the prevalence and nature of faith-based food aid across different religions; and explore how community food aid meets the needs of a multi-ethnic, multi-faith population.

Methodology

The study involved two phases of primary research. In phase one, desk-based research and dialogue with stakeholders in local food security programmes was used to identify faith-based responses to food insecurity. Phase two consisted of 18 semi-structured interviews involving faith-based and secular charitable food aid organizations.

Findings

The paper illustrates the internal heterogeneity of faith-based food aid. Faith-based food aid is highly prevalent and the vast majority is Christian. Doctrine is a key motivation among Christian organizations for their provision of food. The fact that the clients at faith-based, particularly Christian, food aid did not reflect the local religious demographic is a cause for concern in light of the entry-barriers identified. This concern is heightened by the co-option of faith-based organizations by the state as part of the ‘Big Society’ agenda.

Originality

This is the first academic study in the UK to look at the faith-based arrangements of Christian and Muslim food aid providers, to set out what it means to provide faith-based food aid in the

1
2
3 UK and to explore how faith-based food aid interacts with people of other religions and no
4
5 religion.

Introduction

Religious activity has been a conspicuous feature of recent developments in food aid (Lambie-Mumford and Dowler, 2014). This operates at an organizational level – the Trussell Trust, the principal coordinator of UK food banks, is a charity founded upon Christian principles (Trussell-Trust, 2016) – and at the level of individuals: 70 percent of evangelical Christians have donated to a food bank in the last year (Kandiah, 2015). While the involvement of other religions has been less visible than the high profile role of Christian organizations and churches, Muslim, Sikh and Jewish groups in the United Kingdom (UK) do appear to be increasingly targeting their activities towards food insecurity (Dugan, 2014, Forrest, 2014).

The high level of religious, most notably Christian, engagement in food provision may be associated with shifts in government policy and political rhetoric since 1997 (Cairns et al., 2007, Harris et al., 2003). As a component of civil society faith-based organizations (FBOs) have experienced public policy pressures to deliver services (Cairns et al., 2007, Harris et al., 2003), however, in comparison with Third Sector Organizations (TSOs), FBOs have been more reticent in formally engaging with the state in delivering services (Rochester and Torry, 2010). It would appear that the Coalition government's 'Big Society' agenda, which placed a strong emphasis on localized, non-state solutions in public services, aimed to open up a space for faith-based organizations in non-formal approaches to public service delivery.

Nevertheless, this objective was largely reflected in government rhetoric rather than policy change or the improved availability of financial resources for increasing religious involvement (Clifford, 2016), with former Prime Minister David Cameron claiming, 'Jesus invented the Big Society 2,000 years ago ... I just want to see more of it' (Walsh, 2014) and

1
2
3 arguing that religion has an important role in 'helping people to have a moral code' (Mason,
4
5 2014).
6
7
8

9
10 Despite the apparent zeal with which religious organizations and individuals have responded
11 to food insecurity, religious leaders have been highly critical of government equivocations
12 over the extent and causes of hunger, arguing for government to address the roots of food
13 insecurity through policy change (Butler, 2014). While members of the Anglican Church
14 have been most public in their criticism of government apathy, representatives of all the main
15 Christian denominations and representatives of other religions, such as Judaism, have
16 publically engaged with anti-hunger campaigns. Muslim leaders appear to have been absent
17 from formal public criticism of government (Forrest, 2014).

29 This paper uses data from a city with a multi-ethnic, multi-faith population in the north of
30 England (Bradford) to better understand faith-based food aid. There are four objectives.
31
32

33 First, to understand what constitutes faith-based responses to food insecurity and to present a
34 typology of faith-based food aid in the UK. Second, to compare the prevalence and nature of
35 faith-based food aid across different religions in the context of recent social policy changes.
36
37
38

39 Third, to compare the prevalence and viability of faith-based and secular food aid. Fourth, to
40 explore how community food aid meets the needs of a multi-ethnic, multi-faith population.
41
42
43

44 Without negating the generosity of many of those involved, the paper seeks to contribute to a
45 developing academic debate which critiques UK food aid and questions the social, political
46 and policy context in which it has come to prominence.

Background

Faith-based organizations (FBOs)

Exactly what it means to be a FBO providing social services is equivocal. Drawing on applied organizational theory, Jeavons and Cnaan (1997) propose seven dimensions for defining an organization as 'religious', ranging from organizational self-identity to sources of resources to the distribution of organizational power. For each dimension, an organization may be placed along a spectrum from least to most religious (Jeavons and Cnaan, 1997). Belcher and Deforge (2007) also emphasize a spectrum of faith-based organizations; their main criterion, however, is the extent to which an organization proselytizes (Belcher and Deforge, 2007). Sider and Unruh (2004) take an alternative approach, dividing their seminal typology of faith-based organizations into two sections (organizations and programmes), recognizing that the religious characteristics of an organization differ from the programmes it operates (Sider and Unruh, 2004). Despite such semantic and structural differences between typologies of FBOs, existing models share common themes. Notably, the premise that religion is not an independent attribute but a dynamic to be incorporated into the organization in a variety of ways and a recognition that the question of whether an organization is faith-based cannot be answered with a simple yes or no (Sider and Unruh 2004).

FBOs providing social services are highly prevalent in North America (Kearns et al., 2005). FBOs in the United States (US), in particular, are comparable to their secular counterparts in many respects - size, funding, programme capacity and management sophistication – however they are also substantially different from secular agencies, with regard to their extensive use of volunteers, their relatively low reliance on government funding, and their

1
2
3 comparatively low engagement in policy advocacy (Kearns et al., 2005). The applicability of
4 policy analysis about FBOs in the US to the UK social policy context is questionable, notably
5 the scope for transferring welfare responsibilities to faith-based organizations is far greater in
6 the US than in the UK (Harris et al., 2003). Nevertheless, FBOs are increasingly involved in
7 service delivery in the UK (Jarvis et al., 2010, Cairns et al., 2007) and this calls for a fresh
8 analysis of FBOs with particular reference to the UK policy context.

14
15
16
17
18

19 There are multiple, interrelated factors that contribute to religious involvement in public
20 services and community engagement. As discussed above, political and policy pressures are
21 increasingly influential on church contribution to service delivery, however, public service is
22 also inextricably linked to theology (Cairns et al., 2007). For instance, service may be
23 considered as an outward expression of personal faith, compassion and solidarity (Sager and
24 Stephens, 2005, Clydesdale, 1990). However, the development of religious involvement in
25 social problems can also be prosaic, such as the straightforward desire to make good use of
26 church buildings (Cairns et al., 2007).

37

38 *Faith-based food aid*

39
40
41
42

43 Despite the large and growing body of work on US and UK faith-based organisations and
44 service delivery, there is limited evidence on faith-based organisations in relation to food aid
45 specifically. A recent study of religion in the arena of food aid in Finland (Salonen, 2016),
46 suggests that the shape and function of religion in food assistance is context-specific.
47
48
49

50 Religion is socially produced in ‘the practices of the food banks, in the goals of the food
51 providers, and in the lived experiences of the food recipients’ (36). Salonen’s analysis
52 focused on Christian food banks only and, hence, cannot comment on religion in other food
53
54
55
56

1
2
3 aid contexts or food aid provided by religions other than Christianity. Despite the high level
4
5 of religious involvement in UK food aid (Lambie-Mumford et al., 2014, Sosenko et al.,
6
7 2013), there is an absence of in-depth studies on faith-based food aid in the UK.
8
9

10 11 **Methodology**

12 13 *Study site and population*

14
15
16
17
18
19
20 The study was undertaken in Bradford (a city in the north of England) with individuals who
21
22 have experience with anti-hunger/food security programmes in faith-based and secular
23
24 organizations. Bradford District is the sixth largest metropolitan area in the UK (in terms of
25
26 population) (Gill, 2015) and has the largest proportion of people of Pakistani ethnic origin
27
28 (20.3 percent) in England, which contributes to its large Muslim population (24.7 percent). 46
29
30 percent of the district's population is Christian (45.9 percent) and just over one fifth (20.7
31
32 percent) describe themselves as having no religion.
33
34
35
36
37

38
39 The study involved two separate phases of primary research conducted between June and
40
41 November 2015. In phase one, desk-based research using the Internet and local government
42
43 resources and dialogue with key stakeholders in Bradford's food security programmes was
44
45 used to identify faith-based responses to food insecurity in the District. Phase two consisted
46
47 of 18 semi-structured interviews in Bradford involving individuals from faith-based and
48
49 secular organizations with experience of food security programmes at a community level.
50
51 Ethical approval was obtained from the University of York, Department of Health Sciences
52
53 Research Governance Committee (Ref HSRGC/2015/712). Sample organizations were
54
55 chosen purposively from the 67 food aid organizations identified in the desk-based analysis
56
57
58
59
60

1
2
3 to form a representative sample, which included various types of organization and multiple
4
5 religions. The faith-based organizations in the final sample were Christian and Muslim only.
6
7 Interviewees within the sample organizations were also chosen purposefully to capture
8
9 perspectives that would best represent the organizations' positions. Publically available
10
11 information was used to draw up a contact list. Invitations to join the study were sent to the
12
13 appropriate person within an organization. Organizations that failed to respond were removed
14
15 from the sample. Others declined to be involved or suggested another organization in their
16
17 place. If this occurred, the organization was contacted only if it was considered an
18
19 appropriate replacement. Reasons given for declining to participate included a perception of
20
21 no relevant experience and failure to see the study's value. The final sample was biased
22
23 towards emergency food aid providers, however, this was not considered problematic given
24
25 the current salience of the issue and the high prevalence of deprivation in Bradford. Table 1
26
27 provides details of the interview organizations/participants.
28
29
30
31
32

33 **Table 1. Sample Characteristics (table goes here)**
34
35

36 The topic guide was informed by a literature review (above) and discussion with the project
37
38 team. The interviews were conducted by a White British female interviewer, recorded on a
39
40 Dictaphone and transcribed verbatim. A three-stage analysis approach (Dwyer, 2002) was
41
42 used to analyze the transcripts. Each transcript was summarized to understand the narrative.
43
44 A coding frame was devised based upon common themes/sub-themes and, using Nvivo 10,
45
46 these codes were applied to each transcript. Relevant text was indexed whenever a theme
47
48 appeared. The appropriately indexed material was transferred to a grid and catalogued with
49
50 basic organizational and demographic details about the sample. To preserve anonymity of
51
52 participants and, as required by the Ethics Committee approval, details about the
53
54 organizations and individuals in the sample are kept to a minimum.
55
56
57
58
59
60

Results

The nature of faith-based provision will first be set out, followed by a description of how religion is expressed in the context of food aid. The objectives and motivations of faith-based food aid and the perceived 'client'ⁱ experience of receiving food from a faith-based organization will then be reported.

Faith-based community food aid

Overview of faith-based food aid in Bradford. Of the 67 community food aid providers identified in Bradford, 48 percent (n=32) described themselves as faith-based, 36 percent (n=24) identified as Christian and 12 percent were Muslim (n=8). This is unreflective of Bradford's religious demographic: nearly one quarter of the population (24.7 percent) identify as Muslim and just over one fifth of the district's population (20.7 percent) describe themselves as having no religion. The discrepancy between the proportion of community food provided by Muslims and the proportion of the population identifying as Muslim raises concerns about how well food aid in Bradford reflects the local demographic.

In Bradford, organizations providing emergency food - hot food providers (soup kitchens and soup runs) and food banks - were more likely to have their origins in faith-based charities than those providing non-emergency food - community cafes, community kitchens, community supermarkets and environmental organizations - which tended to be secular. Of the 19 hot food providers and soup runs, 11 were Christian (Catholic, Methodist, Anglican and Evangelical Covenant Church), five were Muslim and four were secular. Of the eight food banks, 6 were Christian, one was secular and one Muslim.

1
2
3
4
5 *Conceptualizing faith-based food aid.* Faith-based food aid can be defined in multiple ways.
6
7 In the study sample, the extent to which a food aid provider was faith-based was principally
8 decided by legal and organizational ties: the provision of food was legally a project of a
9 registered faith-based charity, such as a church. Foundational financial and resource support
10 from religious institutions and faith-based charities may also contribute to the extent to which
11 a food aid project is 'faith-based'. Of the 15 faith-based food projects in this study, nine
12 received financial resources that were integral to its operations from religious institutions or
13 individuals. An explicit expression by staff of their religious identity and belief was also
14 characteristic of faith-based food aid. In this study, faith-based food aid was predominantly
15 staffed by people who were a member of a religious institution. This ranged from food
16 projects with a combination of self-identified secular and religious staff members, to those
17 with a dominance of religious staff members. An expression of religious principles and
18 teachings in the interaction between staff and clients was a feature of the most overtly faith-
19 based forms of food aid. A minority of study organizations promoted a message of faith in
20 the provision of food (n=5) and those which did tended to be Christian hot food providers.

26
27
28
29
30
31
32
33
34
35
36
37
38
39
40

41 The data indicated that the degree to which a project was faith-based was consequent upon its
42 number of faith-based characteristics and the predominance of these characteristics. This
43 applied to both Christian and Muslim organizations. Figure 1 displays the hierarchical layers
44 characterizing faith-based food aid.
45
46
47
48

50
51
52
53
54
55
56
57
58
59
60

1
2
3 **Figure 1. Layered defining characteristics of faith-based food aid (authors' own) (goes here)**
4
5
6

7 Accordingly, there is a spectrum of types of food aid depending on the strength of an
8 organization's acceptance of religious doctrine and religious institutions (see Figure 2).
9

10
11
12
13
14 **Figure 2. Food aid faith-secular spectrum (authors' own) (goes here)**
15
16

17
18 The far left end of this spectrum is occupied by faith-based projects which aim to continue a
19 religious tradition of charitable services for 'the poor' ('a response to a spiritual call').
20

21 Organizations in this category are inspired by and aim to enact religious doctrine; they may
22 also be a project of, or funded by, a religious institution. Second to this exist a hybrid-type of
23 faith-based project which may enact their religion either with their clients or personally
24 through the provision of food, but whose primary relationship with religion in the provision
25 of food is functional. 'Functional faith' is the final category of faith-affiliated food aid
26 organizations. This includes organizations legally describing themselves as faith-based but
27 whose affiliation to a particular religion is purely functional, such as the use of a religious
28 building.
29
30
31
32
33
34
35
36
37
38
39

40
41
42 A merging of religious and secular boundaries was apparent in some food aid organizations
43 ('the secular side of faith'). Secular projects may celebrate religious festivals with their
44 clients, such as Eid and Christmas, or benefit from increased donations during religious
45 festivals. Alternatively, faith-based projects may support secular social services using their
46 venue as a site to meet clients.
47
48
49
50
51
52
53
54
55
56
57
58
59
60

1
2
3 The far end of the spectrum is occupied by secular projects that assertively reject the
4 involvement of faith organizations or individuals ('positive atheism'). In the sample, this was
5 expressed in the repudiation of religious volunteers or religiously motivated donations:
6
7
8

9
10
11 I don't allow politics and religion; you can leave that at the door. I weed out those
12 volunteers who are motivated by religion. I don't want the people to be a witness.
13
14

15
16 Hot food provider (secular), Manager, P15
17
18
19

20
21 *The expression of religion in food aid*
22
23
24

25 Within faith-based food aid, religion may be expressed implicitly or explicitly. An implicit
26 expression of religion, one in which the expression of faith is not premeditated, may operate
27 through the building. Among study organizations, food was commonly distributed from a
28 church or mosque and, while clients were not required to engage with the building, the
29 material space was a site of religious imagery. Religion may further be expressed implicitly
30 through the religious identity of staff members, as displayed through what they wear. In a
31 minority of study projects (n=2), staff members who interacted with clients wore religious
32 dress, such as habits or clerical collars. Such clothing was an inescapable message of faith.
33
34
35
36
37
38
39
40
41
42
43
44

45 Religion was expressed explicitly through religious music and activities run during or
46 immediately before or after the distribution of food, and in the interactions between staff and
47 clients. An explicit expression of religion was most common in Christian hot food providers;
48
49
50
51
52 Muslim providers made no reference to the religious aspects of the organization.
53
54
55
56
57
58
59
60

1
2
3 Faith-based activities included Bible classes and prayer circles involving staff and clients
4
5 (n=4). Engagement in prayer was in some organizations seen to be voluntary: it was
6
7 considered an adjunct to the distribution of food and pursued only if resources allowed:
8
9

10
11 We are not hiding behind our faith at all but we are not ramming it down people's
12
13 throats either. We offer to pray with them (the clients) but if they don't want it then
14
15 fair enough, they are treated no differently.
16
17

18
19 Food bank (Christian), Manager, P5
20
21

22
23 However, there were examples where the provision of food could be conditional on engaging
24
25 in prayer. This was applicable to two evangelical Christian hot food providers.
26
27

28 29 *Objectives and motivations* 30 31

32
33
34 The origins of faith-based food aid were functional and doctrinal.
35
36
37

38
39 *Doctrinal motivations and objectives.* Religious doctrine contributed at a macro-, meso- and
40
41 micro-level to organizational objectives and staff motivations. In this study, the influence of
42
43 religious doctrine on organizational objectives was only applicable to Christian emergency
44
45 food aid. Neither the Muslim food bank nor the Muslim hot food providers interviewed
46
47 discussed religious doctrine. Religious doctrine was also not perceived as a motivating factor
48
49 among the faith-based non-emergency food providers in the sample.
50
51

52
53
54 At a macro-level, Christian teachings of salvation (of society and of the self) underpinned the
55
56 provision of food aid in some organizations. Providing food assistance to clients within a
57
58
59
60

1
2
3 food bank or soup kitchen was a means through which to 'save' both the client and affirm the
4
5 purpose of the site of food distribution:
6
7

8
9
10 In providing food, support and social services we are bringing heaven down to earth.
11
12 Most people think that doing good work when alive means that they will go to heaven
13
14 when they die but this is a misunderstanding of the Lord's Prayer. It is about helping
15
16 people on earth, so that you bring heaven down to earth.
17

18
19 Food bank (Salvation Army), Manager, P12
20
21

22
23 A religiously founded concept of the human person, encompassing dignity and spirituality,
24
25 also motivated staff to assist individuals in need:
26
27

28
29
30 You can't compartmentalize who we are as people; you can't separate the spiritual
31
32 from the physical being. We try to help the person and in helping the person we are
33
34 drawing upon spirituality and helping the spirituality in them.
35

36
37 Food bank (Salvation Army), Manager, P12
38
39

40
41 More directly, in line with Christian doctrine, food aid provided an 'opportunity' for the
42
43 performance of 'good' behavior, through donating to charity, helping the poor and hungry,
44
45 spreading the gospel and preventing surplus food going to waste.
46
47

48
49
50 At a meso-level, a specific conception of the ideal form and the responsibilities of the
51
52 religious community - informed by Christian principles of solidarity and participation -
53
54 motivated partnerships between churches, encouraged charity towards the destitute and
55
56 supported the public expression of personal religion in the community via food aid:
57
58
59
60

1
2
3
4
5 Interviewer: Do you think faith is a motivation for people to help?
6

7 Definitely. I think there is quite a strong influence in the church at the moment of
8
9 living out your faith in your community.
10

11 Food bank (Christian), Manager, P18
12
13

14
15
16 At a micro-level, staff in some faith-based projects experienced a personal religion which
17 motivated their involvement in food aid. The act of providing food was described by staff in
18 three emergency food providers as a 'response to a spiritual call'. In addition, solace found in
19 religion enabled staff members to cope with the upsetting nature of the work:
20
21
22
23

24
25
26
27 It is religious for sure; it is based on our faith. We don't see it so much as a social
28 work, as much as like a response to a spiritual call and serving the Lord and the poor.
29
30 We couldn't do it without our spiritual base really.
31
32

33
34 Hot food provider (evangelical Christian), Manager, P17
35
36
37

38 *Pragmatic motivations and objectives.* Faith-based food aid exists where secular projects
39 cannot, however, predominantly because existing organizational structures, networks, and
40 resources facilitate the development of food aid and support its ongoing existence. Pre-
41 existing organizational structures expedite the development of faith-based food aid. For
42 instance, and as described above, faith-based food aid is commonly supported by faith-based
43 charities which may sponsor the initial set up. Similarly, networks between faith-based
44 institutions may facilitate collaboration which eases the development of food aid and supports
45 its survival in the long-term:
46
47

3 We got loads of churches...and said, "We are thinking of looking at this, would any
4
5 of you like to be involved?" And I think it was out of 24 churches in total we got 13
6
7 that were dead keen on doing it.
8

9
10 Food bank (Christian), Manager, P5

11
12 Christian and Muslim charities and religious institutions further contribute to the initial
13
14 development and ongoing existence of faith-based food aid through the provision of sustained
15
16 finance, buildings and volunteers. This was fundamental to the feasibility of food aid in a
17
18 climate of limited, short-term third sector funding.
19
20

21
22
23 All faith-based and two secular projects in this study received in-kind (food) and financial
24
25 donations from members of local religious congregations; often this was essential to the
26
27 development of a project:
28
29

30
31
32 We get more donations here (in the mosque) as well. If I make an announcement to
33
34 our congregation on Friday, I will be inundated by Monday.
35
36

37
38 Food bank (Muslim), Manager, P2

39
40
41 It was common for faith-based food aid to benefit from the use of a religious building rent
42
43 free, often including free utilities and facilities. This applied to seven study projects and
44
45 without it their existence would not have been possible. Religious institutions were also the
46
47 primary source of full- and part-time staff and volunteers. Two projects were initiated on the
48
49 insistence of a religious leader external to Bradford, while the development of four
50
51 organizations was attributable to an individual from within the Bradford-based religious
52
53 community:
54
55
56
57
58
59
60

1
2
3 We came to Bradford at the invitation of the Bishop. He invited us to come here, into
4
5 X, because of our work with the poor.
6

8
9

10 11 *The client experience* 12

13
14
15
16 *Overview of clients, as presented by staff members.* As discussed above, the religious
17
18 affiliation of food aid in Bradford was unreflective of the District's religious demographic.
19
20 While not necessarily a problem in itself, the very low use of faith-based food aid by the local
21
22 Pakistani community - the majority of which is Muslim - raises doubts about how well faith-
23
24 based food aid is able to serve those of other religions. Among all food aid providers, clients
25
26 were reported by staff to be predominately White British, with a large minority of recent
27
28 migrants from the European Economic Area (EEA). Although, overall, a small minority of
29
30 clients were of Pakistani ethnic origin, secular food aid and the food aid provided by
31
32 members of the Pakistani community or directly affiliated to mosques reported serving more
33
34 Pakistani clients than Christian-affiliated food aid. It was surprising, therefore, that
35
36 interviewees did not appear to consider this lack of diversity to be an issue or expressed the
37
38 belief that there was less need among the Pakistani community.
39
40
41
42
43
44

45 There was also a common perception, particularly among food aid organizations in majority
46
47 White British areas, that the client demographic reflected the local demographic, which in
48
49 itself was seen to abdicate an organization from questions of accessibility:
50
51

52
53
54 This is a very white area...the BNP (British National Party) their main office is in X
55
56 and the local secondary school has got you know a handful of ethnic non-British
57
58
59
60

1
2
3 people. Simply because it is not in an area where those people are, not because there
4
5 is any restriction on them.
6

7 Food bank (Christian), Manager, P5
8
9

10
11 *Perceived client experience of faith in food aid.* Without interviews with people using faith-
12 based food aid, client experience could only be inferred from the perceptions of the
13 interviewees (a staff member or manager of food aid). There was a common perception
14 among interviewees in Christian providers that faith-based food aid was more welcoming,
15 caring, personal and respectful towards clients than secular food aid, particularly secular food
16 aid funded the state. This was not discussed by staff in Muslim food aid and it may be related
17 to the relative inconspicuousness of religion among the Muslim organizations interviewed.
18
19
20
21
22
23
24
25
26
27

28
29 The welcome and care received by clients was directly attributed to the influence of religion,
30 for instance staff behavior was inclusive *because* of Christian teachings of respect and
31 dignity. Requests for prayer from some clients and regular attendance at some long-standing
32 faith-based food providers suggested that client' may benefit from the possibilities - solace,
33 friendship, the possibility of change - offered by religion in the provision of food aid:
34
35
36
37
38
39
40
41
42

43 They have tried sex, drugs and alcohol. But they haven't tried God and that way of
44 life, because that way of life can change your life. They step into this world. The more
45 they hear, the more they think, "I can change".
46
47
48

49 Hot food provider (evangelical Christian), Manager, P16
50
51
52

53
54 However, the extent of client engagement with and respect for, as opposed to indifference to,
55 religion in the context of food aid was questionable. Faith-based food aid was considered an
56
57
58
59
60

1
2
3 opportunity for preaching to or praying with clients, at times with the objective of religious
4
5 conversion:
6
7
8

9
10 Then the other thing which some people find difficult but which we do offer, we make
11 it clear that we are a group of churches running it and we are a Christian organisation.
12

13
14 We believe in the power of prayer and we offer to pray with people.
15

16 Food bank (Christian), Manager, P10
17
18
19

20
21 Client respect of religion and 'good' behavior was maintained through the possibility that
22 food and welcome could be withdrawn. In some cases the receipt of food was conditional on
23 praying or listening to a sermon, while the long-term trajectory of the client could be
24 influenced via providing professional support from faith-based social services and charities.
25
26 More subtle but equally forceful power dynamics were at play in projects where prayer was
27 voluntary. While prayer was considered voluntary by the staff, the limited autonomy of the
28 client rendered this questionable:
29
30
31
32
33
34
35
36
37

38 Now most people take it up and say things like, "my mum goes to church" or "I used
39 to go to Sunday school" you know, "I will try anything basically, I am in such a hole".
40

Discussion

Main findings

The high prevalence of faith-based food aid in the case-study area (48 percent) is in keeping with previous literature (Lambie-Mumford et al., 2014, Sosenko et al., 2013). The majority of faith-based food aid was Christian, which is in line with the high involvement of Christian organizations in faith-based public services and community engagement in the UK, as previously identified (Jarvis et al., 2010). Food banks were more likely to be faith-based than any other model, although soup kitchens were also predominantly faith-based. Muslim food aid was in the relative minority, despite the local context and non-emergency food aid was largely secular.

Defining faith-based food aid. Faith-based food aid could be defined by multiple characteristics. The degree to which a project was faith-based was consequent upon its number of religious characteristics and the strength of these characteristics. Accordingly, there was a spectrum of types of food aid - faith-based and secular - depending on the strength of an organization's acceptance or rejection of both religious doctrine and religious institutions. This is consistent with the work of Jeavons (1997), Belcher and Deforge (2007) and Sider and Unruh (2004), all of whom identify a spectrum of FBOs according to the number and intensity of their religious characteristics. Sider and Unruh's (2004) distinction between the religious characteristics of an organization and the programmes it operates was not found in this study. This may be partly attributable to the small size and informal organizational arrangements of many of the organizations in the sample, which precluded formal distinction between organization and programmes.

1
2
3
4
5 Within faith-based food aid, religion could be expressed implicitly or explicitly. An implicit
6 expression of religion, in which the expression of faith was not premeditated, operated
7 through the building or through the religious identity of staff members. Religion was
8 expressed explicitly through religious music and activities, including prayer, and in the
9 interactions between staff and clients. An explicit expression of religion was most common in
10 hot food providers, as opposed to food banks or providers of non-emergency food aid.
11
12
13
14
15
16
17
18
19

20
21 *The origins of faith-based food aid.* The origins of faith-based food aid were functional and
22 doctrinal. Religious doctrine contributed to organizational objectives and staff motivations at
23 the level of religious teachings (macro), at a community-orientated level (meso) and on a
24 personal level (micro). As reported elsewhere, religion was inextricably linked with a
25 project's community-based charitable engagement (Cairns et al. 2007). The act of providing
26 food was not only an integral part of living a Christian life (Salonen, 2016, Cairns et al.,
27 2007) but itself a form of prayer. Nevertheless, despite the importance of religious doctrine to
28 staff and organizational objectives, as has been suggested by previous literature (Cairns,
29 2007), a key motivation for faith-based food aid in this study – Christian and Muslim – was
30 pragmatism. Faith-based food aid existed where secular projects could not predominantly
31 because established organizational structures, networks, and resources facilitated the
32 development of food aid and supported its ongoing existence.
33
34
35

43
44
45
46
47
48

49 *Christian and Muslim provision compared*

50
51
52
53

54 In this study, organizations affiliated to Christianity through legal ties, funding arrangements,
55 and/or the identity and motivations of staff members were far more likely to provide food aid
56
57
58
59
60

1
2
3 than organizations affiliated to Islam. Existing analyses of religious involvement in
4
5 community and voluntary activities at a local level similarly show high representation of
6
7 Christian, particularly Church of England, communities and low representation of other
8
9 religions (Jarvis et al., 2010, Bekkers et al., 2008). The Muslim food aid providers in the
10
11 sample were faith-affiliated in a functional capacity only: providers were (legally) nested
12
13 within Islamic organizations and received financial and in-kind support from the latter and/or
14
15 from members of congregations in local mosques. Christian food aid, on the other hand, was
16
17 not only more numerous but more explicitly faith-based. In contrast with North American
18
19 research indicating that few faith-based organizations and services engage in proselytizing
20
21 (Cnaan, 2001, Smith and Sosin, 2001, Wineburg, 2001), in this study, a large minority of
22
23 faith-based food aid preached to or prayed with clients. Christian doctrine was discussed by
24
25 many Christian study participants as a key motivation for their provision of food aid. Asked
26
27 directly (by the interviewer) about their motivations for providing food aid, representatives of
28
29 Muslim food aid did not mention Islamic doctrine, instead staff spoke of motivation
30
31 stemming primarily from unmet need and secular principles of charity. Given the importance
32
33 of compulsory (Zakat) and voluntary charity (Sadahaq) in Islam (Khan et al., 2010), the
34
35 absence of any reference to Islam and Islamic philanthropy by Muslim interviewees was
36
37 unexpected and requires further investigation.
38
39
40
41
42
43
44

45 *Faith-based versus secular provision, in the context of the 'Big Society'*

46
47
48

49
50 In comparison with their secular counter-parts, faith-based food aid providers were, in
51
52 general, better financed, staffed and resourced and, as a movement, more internally coherent
53
54 and viable. In a climate of limited, short-term third sector funding, the contributions of
55
56 Christian and Muslim charities were fundamental to the initial development and ongoing
57
58
59
60

1
2
3 existence of faith-based food aid. Additionally, staff in faith-based food aid, motivated by
4
5 religious doctrine and united by a shared faith appeared to be more consistent and committed
6
7 than secular staff in secular food aid. The viability of faith-based, as opposed to secular,
8
9 organizations has been identified elsewhere (Farnell, 2001). Farnell (2001) suggests that the
10
11 resources and religious connections contributed by members of religious communities are
12
13 good, in themselves, contributing to the performance of social service. Also, financial
14
15 viability and coherence as a movement generate confidence that they are independent of the
16
17 state and market (Harris et al., 2003, Farnell, 2001).
18
19

20
21
22
23 Yet, ironically, it is in their widespread and consistent delivery of food services that religious,
24
25 especially Christian, groups have evolved to fit a policy agenda developed by New Labour
26
27 (1997-2010) and continued by the Coalition Government (2010-2015) and the 2015
28
29 Conservative Government. Religious food aid occupies a space for faith-based involvement
30
31 in non-formal approaches to public service delivery. Christian food aid, in particular,
32
33 embodies the Coalition's 'Big Society' agenda in a) its localized, non-state solution to issues
34
35 - poverty and hunger - that were, according to the 1945 welfare model, the prerogative of the
36
37 state and b) the moralized character of service delivery, inculcating a 'moral code' in those
38
39 assisted. Nevertheless, and in line with the work of Harris (2003), faith-based food aid
40
41 organizations, again most notably those of Christian denominations, do not provide assistance
42
43 because it is demanded or encouraged by government, rather it is theologically and
44
45 pragmatically motivated. The act of providing food is above all a personal experience of
46
47 expressing faith and performing acts of compassion and solidarity. The concept of charity
48
49 within the Islamic framework, specifically, adds a further dimension to the place of faith-
50
51 based food aid within a wider political/policy agenda. Charity, within the Islamic framework,
52
53 acts as a social security mechanism imposed on the faithful (Gambling and Karim, 1986), in a
54
55
56
57
58
59
60

1
2
3 sense transferring the burden of social security from the state to the individual (Khan and
4
5 Murdock). Yet, in this study Christian, not Muslim organizations, acted as a proxy welfare
6
7 state.
8
9

10
11 *The client experience and the exclusionary implications of faith-based food aid*
12
13

14
15
16 Perhaps surprisingly given Bradford's ethnic diversity (Bryant et al., 2013), clients of food
17
18 aid providers were predominantly 'White' (Slocum, 2007). In particular, Christian food banks
19
20 and soup kitchens reported serving very few Pakistani and/or Muslim clients. Although the
21
22 reasons for this were not stated, the data intimated possible forms of inadvertent exclusion,
23
24 also found in analyses of food aid in North America (Slocum, 2011, Slocum, 2006).
25
26

27
28 Representations of 'White' food predominated, with few non-Muslim organizations catering
29
30 for cultural diets, and a large minority of Christian food aid required clients to engage with
31
32 Christian doctrine or symbols.
33
34

35
36 However, the extent to which the presence of religion may affect clients at faith-based food
37
38 aid is disputable. The apparent absence of ethnic and religious diversity at faith-based food
39
40 aid might reflect perceived exclusivity, however religious beliefs and traditions may have a
41
42 positive as well as a malign impact on the actions of individual service users and practitioners
43
44 (Furness and Gilligan, 2012). An interesting dimension is evident in research from Finland.
45
46 Despite the efforts of some food banks to emphasize the religious elements of their work,
47
48 food recipients often consider religion unremarkable and inessential, viewing the food bank
49
50 as predominantly secular (Salonen, 2016).
51
52
53
54
55
56
57
58
59
60

1
2
3 The centrality of religious conversion to the provision of food in a significant minority of
4
5 study projects conflicts with the findings of Cairns, Harris and Hutchinson (2007) who found
6
7 that overt evangelizing in faith-based public services and community programs was
8
9 considered controversial and, as such, avoided (Cairns et al., 2007). It also contrasts with the
10
11 work of Belcher and Deforge (2007) who concluded that, while volunteers of faith-based
12
13 social services in the US believed their volunteerism to be both representative and an
14
15 extension of their Christian service, they also felt strongly about not proselytizing clients
16
17 (Belcher and Deforge, 2007). In contrast with this study, Cairns (2007) found that church
18
19 volunteers and project users commented on the fact that attending a church-organized activity
20
21 gave them an opportunity that they would have otherwise lacked to get to know people from
22
23 a different ethnic or religious background, indeed churches in multi-ethnic and multi-
24
25 religious areas were often considered to have developed good links with the local Muslim
26
27 population through the community services they developed.
28
29
30
31
32
33

34 The apparent absence of Pakistani and Muslim clients at Christian food banks and soup
35
36 kitchens may be explained not by the exclusivity of faith-based food aid itself but by lower
37
38 levels of food insecurity among Pakistani-Muslims in Bradford. Evidence suggests that
39
40 Pakistani people living in the UK do not necessarily experience the poor health outcomes that
41
42 their relatively high levels of deprivation, in comparison with the white ethnic majority
43
44 (Nazroo, 1997), may lead one to expect (Uphoff et al., 2016). It is theorized that support
45
46 within social networks among ethnic minority communities may mitigate the effects of
47
48 poverty on health (Pickett and Wilkinson, 2008). Lower levels of food insecurity among
49
50 Pakistani-Muslims living in Bradford would be in keeping with this. However, as discussed
51
52 in Power et al. (2016), although the prevalence of food insecurity is lower among Pakistani
53
54
55
56
57
58
59
60

1
2
3 than White British women, food insecurity does exist among the former group with 1 in 10
4
5 Pakistani women in Bradford reporting food insecurity (Power et al., 2016).
6
7

8
9
10 The low use of food aid by Pakistani-Muslims in Bradford may, therefore, be attributable to
11
12 the existence of alternative, hidden forms of food assistance among the Pakistani-Muslim
13
14 community surrounding mosques. Borell and Gerdner (2011) found that in Sweden, Muslim
15
16 congregations are both religious and social meeting places and centers for the organization of
17
18 a range of social welfare services (Borell and Gerdner, 2011). There are also non-Mosque
19
20 based arrangements in Pakistani-Muslim communities for sharing savings in mutual aid
21
22 groupings and distributing according to need. While the particular forms of Islamic finance in
23
24 terms of banking and associated 'loans' have been examined in the literature (Warde, 2000)
25
26 the more informal, albeit widespread, expression of mutuality are relatively hidden (Alam,
27
28 2011).
29
30
31
32
33

34 *Study strengths and limitations*

35
36
37

38 This study provides an insight into the different types of faith-based organizations responding
39
40 to food insecurity at a time of high political and media interest but limited academic analysis.
41
42 It is the first academic study in the UK to look in detail at the faith-based arrangements of
43
44 Christian and Muslim food aid providers, to set out what it means to provide faith-based food
45
46 aid in the UK and to explore how faith-based food aid organizations interact with people of
47
48 other religions and no religion. As such, it raises concerns about the accessibility of faith-
49
50 based food aid.
51
52
53
54
55
56
57
58
59
60

1
2
3 However, the sample of community food aid providers is biased towards emergency
4 provision and includes Muslim, Christian and secular organizations only. In addition, it was
5 not possible to access informal expression of mutuality such as unofficial, ad hoc distribution
6 of food in mosques. The study also did not interview users of food aid and, therefore,
7 findings about project inclusivity and the experience of clients are reported via the
8 perceptions of staff. As a result of these limitations, it is not possible to comment with
9 certainly on whether the relatively low provision of Muslim food aid is a fair reflection of
10 responses to food insecurity by Bradford's Muslim community or, in fact, only a partial
11 reflection of Muslim food aid in Bradford. Further research looking at the prevalence and
12 management of poverty and hunger among low income Pakistani households and exploring
13 informal networks of food aid among the Pakistani Muslim community in Bradford is
14 required to understand the extent to which current food aid excludes people in need.

32 **Conclusions and implications for research and practice**

33
34
35
36 This study's findings illustrate the internal heterogeneity of faith-based food aid and the
37 importance of sensitivity to the exclusive implications of religion in the context of food aid.
38 The fact that the clients at faith-based, particularly Christian, food aid in Bradford did not
39 reflect the local religious demographic is a cause for concern in light of the barriers to entry
40 shown up by the qualitative data, notably the imposition of religion on some clients. This
41 concern is heightened by the cooption of faith-based organizations by the state as part of the
42 'Big Society' agenda. There exists a real danger that faith-based food aid will be used as an
43 inadequate safety net for those in food insecurity, while the fact that they are providing such a
44 safety net will be used to rationalize further cuts in services for vulnerable people. The
45 theological underpinnings of some faith-based food aid and the political apathy of some staff
46
47
48
49
50
51
52
53
54
55
56
57

59
60

1
2
3 within FBOs, in contrast to the public political engagement of religious leaders, may
4
5 paradoxically ease the institutionalization of such organizations within the (welfare) state
6
7 apparatus. Policy responses should focus, therefore, not on furthering food aid (secular and
8
9 faith-based) but on tackling the roots of food insecurity.

24

25 26 27 **Notes**

28
29
30 ¹ 'Clients' is used to describe the people accessing food aid. The term was chosen because it
31
32 was considered preferable to 'recipients', which may connote passivity, and to 'users'; and it
33
34 was used by interviewees to describe people using their services. The term has many flaws -
35
36 not least its association with systems of market-based production - however there was,
37
38 unfortunately, no scope for critique here.
