

Acknowledgements

I would like to thank Dr Carl Knappett; Dr Dirke Mielke; Dr Klass Vansteenhuyse; The Ashmolean Museum, Oxford; Dr Roberta Shaw and The Royal Ontario Museum, Toronto, Canada; and Dr Karen Slej and the Medelhavsmuseet, Stockholm, Sweden for allowing me to analyse their sherds and visible residues. I would also like to thank Dr Andrew Stott of the Lancaster Environment Centre for carrying out compound specific stable isotope analysis, Dr Rebecca Stacey and The British Museum for allowing me to use their facilities and Belinda Hill for technical support. In particular I would like to thank Dr Ben Stern for his patient and supportive supervision throughout this study and the Arts and Humanities Research Council for funding my research.

Special thanks are also due to Andrew, Ruth and Ewan, my very special family, without whom this thesis would never have been completed.
