

## ACKNOWLEDGEMENTS

---

This thesis would not have come to completion without the help, advice and guidance of many people. Firstly, I would like to thank Dr. Alex Gibson for his infinite patience and guidance, without which this would never have seen the light of day. Alex's knowledge of both the periods involved and the county of Leicestershire were invaluable. Additionally, Alex's support in obtaining financial means to produce the thin sections must be applauded. Thanks also must go to Dr. Dave Cotton, who provided advice on geology and microscopy. I am indebted to many people who have aided me over the course of this work, especially Dr. Phil Mills and Dr. Ian Whitbread for their help and for allowing me use of the facilities at the University of Leicester to complete the petrographic analysis and to Dr Carolyn Chenery from the British Geological Survey. Others at the University of Leicester Archaeological Services have contributed greatly both in terms of information and background data, especially Patrick Clay, Matt Beamish, Gavin Speed, John Thomas, Liz Johnson, Nick Cooper and Lynden Cooper. Thanks guys! Keeping to the Leicestershire theme, thanks must also go to Richard Pollard for permission to slice up some of his archival material and to Pete Liddle, Chris Wardle, Richard Clark, Laura Hadland and Lorraine Cornwall for provision of information and data on Leicestershire. Thanks also to the gentlemen from APS who helped and advised, Tom Lane and James Albone, and those at Trent and Peak Archaeology, Graeme Guilbert, Edward Faber, Pauline Beswick, Daryl Garton and especially David Knight who allowed access to pre-published ceramic assemblages. I am grateful to the services of Paul Hands, then of Birmingham University, who produced the thin sections for me and did such a good job that I can only blame myself for any misidentifications. Again, continuing along the ceramic petrography theme, my thanks go to Rob Ixer for training and advice and very nice cheese on toast and to Patrick Quinn and Alan Vince for showing how petrography should be done through good examples, site information and copies of reports and thin section. Alan contributed so much to this thesis by way of help and he will be sorely missed by all. Thank you also to all the HER/SMR staff and various heritage specialists in Derbyshire, Nottinghamshire, Lincolnshire and Northamptonshire, there are a great many of you and my thanks go out to all of them. Thank you to Ann Woodward and Carol Allen for sending me site information and to Richard Moore and Ed McSloy of Network Archaeology for site data and information. Many thanks to Vicki Bennet and Dave McInnes for help with digital mapping. Finally, my thanks go to my family, for ensuring that I got this far in the first place by allowing me to follow the archaeological career and bringing me up well. Lastly, and by no means least, my thanks and love to Jen Wooding, for putting up with me doing this for so long, and advice, patience, support and my first class proof-reader. This couldn't have been done without you.
