Abstract ........................................................................................................... i  
Acknowledgments .............................................................................................. ii  
Table of Contents ................................................................................................ iv  
List of Figures ................................................................................................ xii  
List of Tables ................................................................................................ xxvi  

Chapter 1. Introduction .................................................................................. 1  
1.1 Introduction ............................................................................................... 1  
1.2 The Broxmouth Project and the Research Framework in East Lothian .... 2  
  1.2.1 Origins ................................................................................................. 2  
  1.2.2 Excavation ........................................................................................... 5  
  1.2.3 Post-Excavation and Broader Developments ........................................ 6  
  1.2.4 Breathing New Life: the context of the Broxmouth Project ............... 8  
  1.2.5 The Broxmouth Project (2008-2012) .................................................. 9  
1.3 The changing focus of the thesis ............................................................... 10  
1.4 Thesis Structure ....................................................................................... 11  

Chapter 2. Previous Research ....................................................................... 14  
2.1 Introduction ............................................................................................... 14  
2.2 Hillfort studies to the 1960s: Culture history, classification and typologies 14  
2.3 1960 - 1977: Increasing Complexity ...................................................... 20  
2.4 The ‘Classification’ era (1970s) ............................................................... 22  
2.5 Integrating the Information: Rescue Excavations and Aerial Survey (1977 onwards) ............................................................. 24  
2.6 Perspectives on hillforts and enclosures ............................................... 27  
2.7 Hillforts within the landscape: from passive to active ......................... 29  
2.8 The Indivisibility of Landscape ............................................................... 31  
2.9 Conclusion ............................................................................................... 37
# Table of Contents

Chapter 3.  Methods

3.1  Introduction

3.2  Broxmouth: investigating site-specific data

3.3  Study Area Data: characterising the later prehistoric settlement pattern in south-east Scotland

3.3.1  Compiling the Database

3.3.2  Enclosed sites

3.3.3  Unenclosed sites

3.4  Examining the visual impact

3.4.1  Field Visits

3.4.2  Viewshed Analysis

3.5  Considering Landscape Continuity

3.6  Conclusion

Chapter 4.  The Biography of Broxmouth

4.1  Introduction

4.2  Defining Broxmouth’s Biography

4.3  Considering the taskscape

4.4  Stratigraphic Analysis of Broxmouth

4.4.1  Methods

4.4.2  Chronological Sequence

4.4.3  Relative Sequence

4.5  Environmental Evidence

4.5.1  Extent of Woodland

4.5.2  Animal Husbandry Practices

4.5.3  Using the sea

4.6  Discussion

Chapter 5.  The Development of the Landscape of South-East Scotland

5.1  Introduction
# Table of Contents

5.2 Characteristics of the East Lothian Landscape ........................................ 102

5.2.1 Geology .......................................................................................... 103

5.2.2 Soils............................................................................................... 108

5.2.3 Topography....................................................................................... 110

5.2.4 Hydrography.................................................................................... 111

5.2.5 The Coast........................................................................................ 113

5.2.6 Modern Climate............................................................................... 116

5.3 The early prehistory of south-east Scotland ........................................... 117

5.3.1 Pre-fourth millennium BC................................................................. 117

5.3.2 Fourth millennium to 3500BC ......................................................... 118

5.3.3 3500BC – c. 1300BC ...................................................................... 119

5.3.4 The late Bronze Age change (c.1300-800BC)................................. 124

5.4 Historic to present day land use in south-east Scotland ....................... 125

5.4.1 Moving through the landscape ......................................................... 127

5.4.2 Documented routeways .................................................................. 128

5.4.3 Use of Trackways............................................................................ 129

5.4.4 Dating routeways ........................................................................... 130

5.5 Archaeological Evidence: the Early Historic and Medieval Periods (c410- c.1000AD) ......................................................................................... 132

5.6 Modern Impact of the Archaeological Record (1700-present)............ 136

5.6.1 The Improvements ......................................................................... 136

5.7 Discussion........................................................................................... 138

Chapter 6. Later Prehistoric Settlement of South-East Scotland ............... 141

6.1 Introduction......................................................................................... 141

6.2 Compiling the Database ...................................................................... 141

6.2.1 Morphology .................................................................................... 145

6.2.2 Area Sizes ...................................................................................... 146

6.2.3 Entrance Locations ........................................................................ 147
### Table of Contents

6.2.4 Landscape Setting ................................................................. 148

6.3 Limitations ......................................................................................... 152

6.4 Results ............................................................................................... 154

6.4.1 Landscape Setting, Geology and Soils ........................................ 154

6.4.2 Topography, Soils and Geology Discussion ............................... 161

6.4.3 Landscape Setting ........................................................................... 163

6.4.4 Morphology .................................................................................... 166

6.4.5 Location of different morphologies ............................................. 168

6.4.6 Morphology vs. Landscape Setting .............................................. 170

6.4.7 Constructional Style ...................................................................... 171

6.4.8 Vallation: Single vs. Double vs. Multiple .................................... 176

6.4.9 Vallation vs. Landscape setting .................................................... 177

6.4.10 Area Sizes .................................................................................... 179

6.4.11 Area size vs. Morphology ............................................................ 183

6.4.12 Area Size vs. Altitude ................................................................. 185

6.4.13 Larger sites in the landscape ....................................................... 186

6.4.14 Broxmouth and other multivallate sites in the landscape ............. 188

6.4.15 Number of Entrances and Orientation ....................................... 190

6.4.16 Number of entrances vs. vallation ............................................. 196

6.4.17 Number of Entrances vs. Altitude .............................................. 198

6.4.18 Entrances and the relationship to local topography .................... 198

6.4.19 Opposing Entrances ................................................................. 201

6.4.20 Entrance Discussion ................................................................. 203

6.4.21 Site Biographies ........................................................................... 204

6.5 Comparing Either Side of the ‘Gap’ .............................................. 207

6.5.1 Morphology ............................................................................... 208

6.5.2 Vallation ...................................................................................... 209

6.5.3 Area Size ....................................................................................... 210

Bibliography .................................................. 350

On Disc

Appendix A  Broxmouth Enclosure Circuit Data Structure Reports
Appendix B  Study Area Database
Appendix C  List of Radiocarbon Dates from Excavated Sites in East Lothian
List of Figures

Figure 1.1 Location map of Broxmouth (courtesy of the Broxmouth Project) .......... 2

Figure 1.2 The cropmark of Broxmouth, prior to excavation looking north. The remains of the ditches and entranceways are clear, with partial survival of the interior features (courtesy of the Broxmouth project) ........................................ 3

Figure 1.3 Oblique aerial photograph of the site under excavation, taken in 1978, looking east (courtesy of the Broxmouth project) ......................................................... 5

Figure 1.4 Vertical aerial photography showing the area excavation. Most of the interior was excavated, as well as the entrances and a cemetery to the north, which was discovered by accident (courtesy of the Broxmouth project) .......................... 6

Figure 2.1 Hawkes’ ABC scheme. The stippled areas represent the maximum extent of ‘invading’ cultures in successive time periods (after Hawkes 1931, 63; 78; 91). Note that this scheme did not extend to Scotland ........................................... 16

Figure 2.2 Stuart Piggott’s Scottish provinces with Broxmouth marked in red. TF = Tyne-Forth (the Hownam culture), SC = Solway-Clyde, NE = North-East (the Abernethy culture) and A = Atlantic Scotland (after Piggott 1966, 4) ....................... 20

Figure 2.3 MacKie’s revised scheme for Scotland (1969, 20). This exemplifies the increasing complexity of these kinds of cultural historical schemes as the quantity of data increased ........................................................................................................ 21

Figure 3.1 A disused sheepfold, converted into a fox covert - one of the sites ruled out as a later prehistoric site (Contains OS survey data. © Crown copyright 2012. An ordnance survey/EDINA supplied service) .............................................................. 42

Figure 4.1 Simplified plan of Broxmouth hillfort, showing the excavated areas ....... 52

Figure 4.2 Phase 1 of the Broxmouth sequence, showing the palisade and remains of the early structure (image courtesy of the Broxmouth Project) ......................... 53

Figure 4.3 Principle features of phase 2, including the bivallate fort, the western entrance and the remains of a possible palisade rampart fronting in the south-west area (courtesy of the Broxmouth Project) ........................................ 55

Figure 4.4 Phase 3 activity, including the early and late palisade slots at the south-west entrance. See Figure 4.19 for close-up of south-west entrance features (courtesy of the Broxmouth Project) ......................................................... 56

Figure 4.5 Phase 4 showing the structures sunk into the inner ditch. There is evidence for possible platforms and structures sunk into other ditches, see below and appendix A (courtesy of the Broxmouth Project) ........................................ 57
Figure 4.6 Phase 5 of the hillfort. The principal evidence comes from redeposited middens over the phase 4 structures (courtesy of the Broxmouth Project)..............58

Figure 4.7 Phase 6 activity, consisting primarily of the late-Roman Iron Age settlement. The midden and roadway may be contemporary or slightly earlier (courtesy of the Broxmouth project).................................................................59

Figure 4.8 Phase 7 activity is restricted to an isolated early medieval burial, placed here long after the site was abandoned as a settlement (courtesy of the Broxmouth Project).................................................................60

Figure 4.9 Section through the palisade showing the different phases of construction (courtesy of the Broxmouth Project).................................................................62

Figure 4.10 Profiles of the excavated ditches during phases 2 and 3. From left to right: inner, middle, outer and outermost (west entrance only) (courtesy of the Broxmouth Project).................................................................64

Figure 4.11 Inner ditch north, east entrance. Note the possible palisade slot (LAI), which would have fronted the ditch during phase 2. The evidence suggests also that the first ditch cut [23] naturally silted to a significant degree before the ditch was recut........................................................................................................65

Figure 4.12 Example of how the profiles of the ditches during each phase were calculated. The actual profiles of the two ditch cuts are shown in grey and the estimated profile of the phase 2 inner ditch (LAE - see above) is shown as a dashed line........................................................................................................66

Figure 4.13 The progression of the Overton Down earthwork experiment (the dashed line indicates the original profile) showing that even after 32 years of silting, the bank and ditch were still relatively stable (after Bell 1996, 235), although the ditch profile appears to have slumped significantly.................................................................70

Figure 4.14 Plan of west entrance structure. Although the phase 3 inner ditch has obliterated the remains between the parallel slots, it appears that the two would not have joined originally (courtesy of the Broxmouth Project).................................72

Figure 4.15 A carved entrance post at a Maori pā site at Rotarua, New Zealand (http://www.nzetc.org/tm/scholarly/tei-Bes02Maor-t1-body-d7.html Accessed 25.01.2012) ........................................................................................................73

Figure 4.16 If Chesters Drem’s ditches and banks can still survive after c.2500 years then it is likely that when the Broxmouth inhabitants came to recreate the boundaries, the banks and ditches would still have been visible (image: http://canmore.rcahms.gov.uk) ........................................................................................................75

Figure 4.17 East entrance, outer ditch south side (LAG). This ditch appears to have been recut at least twice and cleaned out occasionally also, evidenced by the thin silty layers at the base ........................................................................................................76
Figure 4.18 The slots and postholes forming the earliest monumental gateway. The ditches shown are later cuts of the terminals; the earlier phases were almost obliterated and only survive in section (courtesy of the Broxmouth Project)...........79

Figure 4.19 Revetment walling along the edge of the outer ditch east terminal (looking north – courtesy of the Broxmouth Project).................................................80

Figure 4.20 Partial section showing large revetment material collapsed into the outer ditch west terminal of the south-west entrance.................................81

Figure 4.21 South-West entrance palisade lines (courtesy of the Broxmouth Project) ........................................................................................................82

Figure 4.22 Inner ditch east terminal (top) and middle ditch west terminal (bottom) at the south-west entrance, showing the different midden deposits ...............84

Figure 4.23 Middle ditch north, east entrance area, showing the possible walling and paving of a structure on the section drawing (top) and photograph (bottom).86

Figure 4.24 Phase 5/6 south-west entrance features. Despite the ditches having silted, this was still a formal entrance. There is evidence for re-paving and repair, suggesting longevity of use (courtesy of the Broxmouth Project) .......................89

Figure 4.25 Percentages of the dominant animal species (according to MNI – Minimum Number of Individuals) present at Broxmouth over time (Cussans forth.) ........................................................................................................92

Figure 4.26 Pilot whale found stranded on Ravensheugh beach in early 2012. Bass Rock can be seen in the distance (http://www.trekearth.com/gallery/Europe/United_Kingdom/Scotland/East_Lothian/Tyningham/photo1340660.htm. Accessed 30.01.2012).................................95

Figure 4.27 Limpet scarred stones incorporated into the phase 5/6 south-west entrance roadway revetment at Broxmouth .................................................96

Figure 5.1 The landscape of East Lothian today. Clockwise from top left: the hills of the Lammermuirs on the border between Berwickshire and East Lothian; the bleak valley overlooked by White Castle through the Lammermuirs; the gentler, rolling hills of East Lothian; the flat coastal plain looking north; the view across the coastal plain, the sea and over the Forth to Fife; the gentle rolling hills now dominated by sheep grazing. Photos: author ..............................................................................102

Figure 5.2 The dominant geologies and fault lines of East Lothian and adjacent areas. (All maps with geology data © British Geological Society and East Lothian council)......................................................................................................103

Figure 5.3 The major volcanic plugs in East Lothian. Top: Traprain Law (from NE). Bottom: North Berwick Law (from SW). Interestingly, both sites have a wealth of archaeological evidence on them (courtesy of Lindsey Büster).......................104
Figure 5.4 Location map of quarries with identifiable geology (Contains first edition OS survey data. © Crown copyright 2012. An ordnance survey/EDINA supplied service). Note the lack of quarrying in the uplands and the dominance of coal exploitation to the west.................................105

Figure 5.5 Old red sandstone eroding from the cliff face, immediately north of Witches Knowe fort. Notice the striking pinkish hue which this stone has and which would have been a dominant colour during the later prehistory (photo: author). ..107

Figure 5.6 Looking south from Garvald Mains. Notice the pinkish colour of the soil, derived from the sandstone geology (photo: author) ..............................................107

Figure 5.7 The drainage characteristics of East Lothian soils (All maps with soil data based on Haddington, Eyemouth and North Berwick sheet 66, © Macauley Institute 1966) .................................................................108

Figure 5.8 Land Capability of Agriculture (LCA) map of East Lothian. The contrast between the coastal plain and the Lammermuirs is apparent in the land-use today (http://www.macaulay.ac.uk/explorescotland/lca.html: Accessed 24.03.2012) ....109

Figure 5.9 The topography of East Lothian and surrounding areas (All maps with topography data © Crown copyright 2008. An Ordnance Survey/EDINA supplied service).................................................................................110

Figure 5.10 The view across the Forth. The hazy landscape in the background is the county of Fife with the two sharp peaks, Largo Law and Kellie Law (looking north from Chesters Drem – photo: author) .............................................111

Figure 5.11 Watercourses running through East Lothian (based on Ordnance Survey data, © Crown copyright 2012. An Ordnance Survey/EDINA supplied service) ....112

Figure 5.12 Map showing extent of marine transgression (light shaded areas) during the early Holocene (after Ballantyne and Dawson 1997, 40; Lelong and MacGregor 2008, 4)..............................................................................114

Figure 5.13 Admiralty chart (1815) of the Firth of Forth. Lines emanate from the dominant land features of East Lothian (Bass Rock, North Berwick Law and Traprain Law from N-S) and Arthur’s Seat to the west. Note the lack of detail on the land, where the knowledge of the sea takes precedence for sailors (http://maps.nls.uk) ........................................................................................115

Figure 5.14 Excavated sites with Mesolithic activity. Lithic scatters are the primary evidence on sites with later activity ........................................................................118

Figure 5.15 Distribution map of known early prehistoric sites from cropmark data (Approx. 3500 – 1000BC) in East Lothian. NB: Sites provided with a four-figure grid reference have been omitted ..................................................................................120
Figure 5.16 Map of standing, or once documented as standing, early prehistoric structures in East Lothian ................................................................. 120

Figure 5.17 Map of early prehistoric, excavated sites and stray finds .................. 121

Figure 5.18 Excavated sites with Neolithic, Bronze Age and later prehistoric activity documented ................................................................. 123

Figure 5.19 A potential middle Bronze Age unenclosed settlement? Hedderwick Mains (NT67NW 20) lies approximately 1km south of Hedderwick, where hundreds of pottery sherds from the Neolithic and Bronze Age periods have been discovered (Callander 1929). The enclosure on the left is assumed to be later prehistoric in date (taken from cropmark data, courtesy of RCAHMS) .......................... 124

Figure 5.20 Kirklands 1 (site 101) located to the north of earlier 'ritual' structures, including round barrows, a long barrow and a possible pit-defined avenue .......... 125

Figure 5.21 Traces of medieval rig and furrow still survive in the Lammermuirs. This example (looking SW) is located on the fringes of the hills approximately 1.5km south of Longyester and the wide rig can be seen on the lower slopes. However narrower rigs survive near the top of the hill and this could be later prehistoric in date. Two later prehistoric sites are also highlighted: Soonhope Burn to the left and Harelaw to the right (© Colin Martin, www.scran.ac.uk) ........................................... 126

Figure 5.22 Map showing early routeways documented by Roy (1755), transcribed from Graham (1951; 1962) and Ingli.s (1916) ............................................................ 127

Figure 5.23 Multiple trackway remains on Lammer Law, part of the Haddington to Carfraemill route. These are believed to date from the medieval period through to the 18th century; however they may have older origins (© Colin Martin, www.scran.ac.uk) ................................................................. 128

Figure 5.24 Map showing the principal early routes out of Berwick to Edinburgh. The road via Duns and Lauder met with Dere Street, the Roman road, although it has been postulated that this would have been placed on an earlier route (based on Inglis 1916; Aliaga-Kelly 1986; Thomson's Atlas of Scotland 1832) .................. 129

Figure 5.25 South-East of East Lothian showing the relationship between prehistoric standing structures and Graham's routeways (based on Graham 1951; 1962) ..... 131

Figure 5.26 A hint at past land use? Sheep were gathered and sheared in early summer and fleeces were collected by specialist workers who travelled around the upland parishes where this practice has dominated since the Medieval period (c.1930; © Grier Collection, East Lothian Library Service, www.scran.ac.uk) ...... 131

Figure 5.27 Map showing the location of potential early historic sites ............ 133
Figure 5.28 Sunken floored buildings in East Lothian. From left: Blacklaw Wood, Parkend and Preston Mill. The greyed out cropmarks are of later prehistoric enclosed sites

Figure 5.29 Early Historic timber buildings. Halls (on the left) was within a potential later prehistoric enclosed site, however the buildings from Whitekirk on the right have been interpreted as possible timber halls and may be of higher status (Brown 1983). This complex predates medieval farm plots and rig and furrow

Figure 5.30 Map of urban centres (population over 1500, census data 2001)

Figure 5.31 South-Eastern East Lothian has numerous place names which derive from medieval (if not earlier) use of this landscape for grazing. Along with ‘shiel’ place names, there is also Herd’s Hill and Summer Hill, referring to the use of this landscape for summer pasturing (© Crown copyright 2011. An Ordnance Survey/EDINA supplied service)

Figure 6.1 Map showing the study area and the principal excavated sites in the area

Figure 6.2 OS Map (1:10,000) showing a disused sheepfold and modern fox covert, one of the sites ruled out as later prehistoric in date (© Crown copyright 2011. An Ordnance Survey/EDINA supplied service)

Figure 6.3 Morphology categories used to classify cropmark enclosures and forts with some examples shown from the study area (in green – see Appendix B) (After Whimster 1989, 29)

Figure 6.4 Compass points assigned to entrance orientations based on north = 0° (after Nottage 2010, 26)

Figure 6.5 Screenshot showing the recorded orientation of site 223 - Whitelaw Hill 2 using the angular dimension tool

Figure 6.6 Example of a hilltop location (site shown in black, other enclosed sites in grey (Whitelaw Hill - site 222) (All maps with contour data © Crown Copyright 2010. An Ordnance Survey/EDINA supplied service)

Figure 6.7 Example of a promontory location (Branxton Cottage - site 21)

Figure 6.8 Example of a scarp location (Carfrae - site 27)

Figure 6.9 Example of slope locations (From left clockwise: Pinkerton Hill 2A and 2B - sites 148 and 149; Pinkerton Hill 1 - site 147; Easter Pinkerton 1 and 2 - sites 64 and 65)

Figure 6.10 Example of a riverine location (East Bearford 2 - site 59)

Figure 6.11 Map showing the location of enclosed sites in relation to the topography; the nine upstanding sites in the study area are shown in yellow
Figure 6.12 Graph showing representation of the average nearest neighbour results, showing the z-value of -9.5 (produced in ArcGIS) ................................................................. 155

Figure 6.13 The enclosed sites of the study area in relation to the geology ........... 156

Figure 6.14 Map of enclosed sites in relation to the soils of the area (soil data from Macauley Institute 1966) ........................................................................................................... 158

Figure 6.15 Study area showing location of farmsteads (lime) and sheepfolds (blue) in relation to soils, routeways and urban areas (black). The gap in later prehistoric settlement is also highlighted. This may be the early modern reflections of the later prehistoric predominance of pasture on the higher ground. See Figure 6.14 for soil key (contains First Edition Ordnance Survey data © Crown Copyright 2011)........ 161

Figure 6.82 The extensive pit alignments that survive near Chesters Drem and Barney Mains .........................................................................................226

Figure 6.83 Distribution of pit alignments across the study area. (shown in blue). Boxes highlight the densest areas of pit alignments within the study area – see Figure 6.84; Figure 6.85.................................................................228
List of Figures

Figure 6.84 Details of the pit alignments (turquoise) in the east of the study area, in relation to watercourses, possible routeways (pink) and enclosed sites (red dots) ................................................................. 229

Figure 6.85 Details of pit alignments in the west of the study area, in relation to watercourses, routeways (pink) and enclosed sites (red dots) ................................................................. 230

Figure 6.86 Enclosures in the study area with partitions potentially defining areas for stock (124; 175-177; 179) and sites with possible outer compounds (93-94; 121-122; 162-163) .................................................................................................................. 231

Figure 7.1 The enclosure at St Germain. Note the ring ditch near the bottom, which appears to be respected by the external ditch (Alexander and Watkins 1998, 207) ................................................................................................................................. 238

Figure 7.2 Plan of Dryburn Bridge during the first enclosed phase, showing the alignment of the earliest houses on the entrances (Dunwell 2007, 99) .................. 240

Figure 7.3 Simplified plan of Fishers Road West, highlighting the two separate early palisade enclosures and possible timber breastwork footings (after McCullagh and Mills 2000, 19) ................................................................. 241

Figure 7.4 Both ditch 2 and 4 vary in profile and depth at Fishers Road West, suggesting that different groups would have been responsible for digging out the circuit (McCullagh and Mills, 13) ................................................................. 248

Figure 7.5 Possible entrance structure at St Germain, as well as an external ditch possibly related to the control of access to the enclosure (Alexander and Watkins 1998, 218) .................................................................................................................. 250

Figure 7.6 Archerfield Cave. If it was not for the build up of beach material, one would have to scramble up the rocks to access it. The wall visible here is thought to be Iron Age although it was rebuilt after the 1908 excavation (www.scran.ac.uk Accessed 30.01.2012) .................................................................................................................. 260

Figure 7.7 Possible field system associated with Knowes enclosure. The boundaries were only revealed on geophysical survey (after Haselgrove et al 2009c, 69; Hamilton 2010, 212) ................................................................. 263

Figure 8.1 A 360° view of the landscape from the chambered cairn Reineval on South Uist. A problem with this is that there is no sense of distance (Cummings 2000) .................................................................................................................. 277

Figure 8.2 Example of recording the landscape from the Tavoliere-Gargano Prehistory Project incorporating a sense of distance (Hamilton and Whitehouse 2006, 42) .................................................................................................................. 278

Figure 8.3 The top example shows the differing observer and target offsets which prevent reciprocity of intervisibility. The bottom example shows theoretically how
the offset in the landscape will work thus solving the reciprocity issue \((X = \text{target cell})\) \cite{conolly2006} ................................................................. 281

Figure 8.4 Location map of upstanding sites selected for further study ............ 284

Figure 8.5 Chesters Drem and its immediate environs. The red denotes later prehistoric settlements, the brown denotes pit alignments and later trackways and the blue indicates rig and furrow................................................................. 287

Figure 8.6 Plan of Chesters Drem, showing the location of the different view recordings. The entrance to the extreme east of the site does not exist on plan and reflects the location of view 1 \cite{rcahms1924} ......................................................... 289

Figure 8.7 (Looking east) The flat land that separates the fort (on the left) and the ridge (on the right). The landscape is invisible until one ‘emerges’ at the east side \cite{crowncopyright2011} ................................................................. 290

Figure 8.8 The views afforded from locations 1 (top) and 2 (bottom) (east entrance) trees..................................................................................................................................... 291

Figure 8.9 The views from the east entrance in particular were blocked by the line of trees (to the east), as well as the farmhouse and coppice to the west. Kilduff Hill forms a natural barrier to the south-east; a feature which also prevented views to the site \cite{crowncopyright2011} ................................................................. 292

Figure 8.10 The approach from the east to the east entrance of Chesters Drem along the gently rising spur. Trying to approach this spur from either the left or right was more difficult due to the steepness on these sides ............................................. 293

Figure 8.11 Photograph taken from viewpoint 2, looking north east. North Berwick Law can be seen on the horizon................................................................. 293

Figure 8.12 View afforded from location 3 (north-west entrance) .................... 294

Figure 8.13 View looking north-north-east from viewpoint 3. The ‘hazy’ horizon is the landscape across the Forth \cite{author2006} ................................................................. 295

Figure 8.14 Viewshed Analysis of Chesters Drem. The blue indicates areas from which the site is visible. Box indicates close up of Figure 8.15. ......................... 295

Figure 8.15 Close-up of Chesters Drem viewshed, showing the principle areas where the site can be seen from............................................................................... 296

Figure 8.16 The pit alignments noted in the vicinity of Black Castle fort, shown in pink. Green Castle can be seen to the south-east .................................................. 300

Figure 8.17 The environs of Black Castle, as depicted by Roy in his military survey. The B6355 can clearly be seen (labelled "road to Duns"). The red dot marks the approximate position of Black Castle. It also shows the edge of cultivation as the
'strips’ denoting arable farming peter out (courtesy of National Library of Scotland http://geo.nls.uk/roy-lowlands/) .......................................................... 301

Figure 8.18 Plan of Black Castle, showing the locations of the view recordings (after RCAHMS 1924, 34) .......................................................... 302

Figure 8.19 Views afforded from locations 1 (top) and 2 (bottom). Only the top of Green Castle could be seen .......................................................... 304

Figure 8.20 The environs of Black Castle; note the higher ground to the south-east (Newlands Hill) and the south west (Dod Law) which restricted views in these directions, as well as the modern plantation running from the site in a NW direction (© Crown copyright 2011. An Ordnance Survey/EDINA supplied service) ........ 305

Figure 8.21 Landscape to the south of Black Castle. Note the hills reducing visibility to c.2km (Photo: author) .......................................................... 306

Figure 8.22 Black Castle viewshed .......................................................... 306

Figure 8.23 Close up of the Black Castle viewshed .......................................................... 307

Figure 8.24 Green Castle (looking E). The inner rampart takes advantage of the natural cleugh and rises high above the vestigial traces of a second rampart lower down (where the arrow points to). The change in colour of the grass also highlights this (photo: author’s own) .......................................................... 309

Figure 8.25 Plan of Green Castle (RCAHMS 1924, 32) .......................................................... 310

Figure 8.26 Green Castle. The car and the people fishing along the banks of the pond give a sense of scale (photo: author’s own) .......................................................... 310

Figure 8.27 View afforded from the entrance at Green Castle .......................................................... 312

Figure 8.28 Green Castle viewshed. See Figure 8.29 for close-up .......................................................... 313

Figure 8.29 Close-up of Green Castle viewshed .......................................................... 313

Figure 8.30 The immediate environs of Garvald Mains Fort (seen in the centre) .......................................................... 315

Figure 8.31 Plan of Garvald Mains fort (RCAHMS 1924, 35), showing the location of the original entrance and its stone revetment. Most of this still survives today .......................................................... 316

Figure 8.32 Traprain Law ‘looming’ in the middle with North Berwick Law (to the left) and Bass Rock (to the right) faintly visible in the background (looking north west). Taken from the track to the south-west of the farm (Photo: Author’s own) .......................................................... 318
