ACKNOWLEDGEMENTS

I would like to express my gratitude to Dr Marina Bloj. Her enthusiasm inspired me and motivated me throughout the last three years. Without her assistance this thesis would not have been possible. I count myself lucky to have had such a supportive supervisor who guided me and helped me to develop on a personal and professional level.

I would also like to take this opportunity to thank Dr Alexa I. Rupperstberg and Glen Harding who always made themselves available to help me and guide me in my research.

Without the financial support of the Pontificia Universidad Católica de Valparaíso I would not have been able to pursue my postgraduate studies and I thank them for this opportunity.

To Hardy who has accompanied me through the good and bad times and has brought colour to my days.

A Hardy que me ha acompañado en los buenos y malos momentos y que le ha puesto color a mis días.

I cannot end without thanking my parents, who have always given me the freedom to make my own decisions and who have supported me over the last thirty something years. This thesis is dedicated to them.

Zum Schluss möchte ich noch meinen Eltern danken, die mir immer die Freiheit gelassen haben meine eigenen Entscheidungen zu treffen, und die mich so selbstverständlich während der letzten etwas über dreißig Jahre unterstützt haben. Diese Arbeit ist ihnen gewidmet.
